

TempGuard

Automated Temperature Monitoring | Recording | Alerting

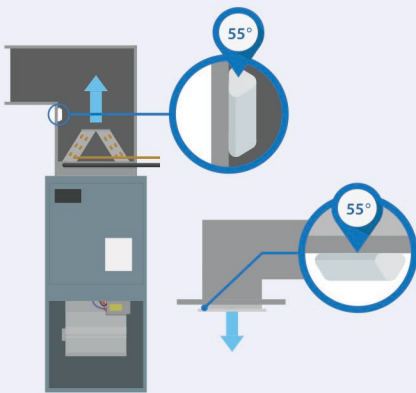

-  Accurately monitor & record all temperatures throughout building
-  Receive alerts when AC units are not running at optimal output
-  View the temperature data to predict failure and respond proactively
-  Always have the right replacement parts on hand for less downtime
-  Keep tenants happy by prioritizing maintenance response

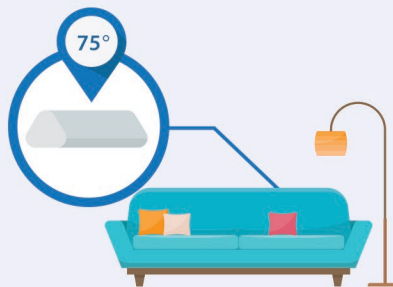

Sensor thermometer pictured

Cut operating costs | Improve customer experience | Become more efficient

Simple Deployment

1. Place sensor in air vent or directly in cooled air supply

2. Place a sensor in the home to view ambient temperature

3. Visualize all temperature data to predict failure
